Like you, our greatest concern is for the well-being of your pet. To maximize patient safety, we recommend (and may require) pre-anesthetic bloodwork and cardiac screening to alert us to the presence of health issues which could complicate the procedure. State of the art equipment enables us to perform these tests at our clinic with results available immediately.

Cardiac Screening \$43.77

Includes a cardiac ultrasound or ECG depending upon the species of your pet. We especially recommend this screening for breeds that are prone to heart disease: Boxers, Dobermans, Great Danes, Cavalier King Charles Spaniels, Maine Coon, Persians, Ragdolls, Cornish Rex, and American Shorthair.

- Please complete the recommended cardiac screening prior to surgery.
- I have elected to decline the recommended cardiac screening at this time and request that you proceed with anesthesia.

Prep Profile Bloodwork (For patients up to 7 years of age) \$54.07

BUN (kidney), Creatinine (kidney), ALKP (liver), ALT (liver), Glucose (sugar), Total Protein (hydration), Packed Cell Volume/PCV (anemia and hydration).

- Please complete the recommended bloodwork prior to surgery.
- I have elected to decline the recommended pre-anesthetic bloodwork at this time.

Diagnostic Profile \$83.58

All patients over 7 years of age are required to have pre-anesthetic bloodwork performed prior to anesthesia.

This test will be performed unless acceptable bloodwork has been performed within the last 6 months. Includes all tests in Prep Profile, protein levels, cancer screening, cholesterol, potassium, and pancreatic levels.
